SpeedTools line

The **SpeedTools line** covers a full range of kits suited for the extraction and purification of nucleic acids (DNA or RNA) from a great variety of samples (blood, tissue, plant, viral, food, plasmid, PCR reactions, agarose gel bands, etc.).

Based on **silica-gel membrane** technology, which is already assembled in a microspin column, eliminates carryover problems which may interfere with downstream applications.

Our isolation protocols as well as our reagents are optimised to provide:

- **REDUCED MANIPULATION STEPS**
Number of manipulation steps (lysis-binding-washing-elution) has been reduced to a minimum without compromising the quality
- **FAST PROTOCOLS**
Short preparation times
- **CONSISTENT HIGH YIELDS**
- **SIMPLE AND RELIABLE PROCEDURES**
Even for small amounts of samples

Common procedure

1. Lysis with optimised buffer

2. Adjustment of the lysate for the binding step (ethanol addition)

3. Selective binding of nucleic acid to the silica-membrane

4. Wash away of impurities, salt, proteins and metabolites

5. Elution of highly pure nucleic acid
