

End Point Master Mixes

Necessary pieces ready to set up DNA amplifications easily and quickly

Master Mix line

Biotoools offers several PCR master mixes that have been optimized to amplify a wide range of templates and accommodate the performance needs. These master mixes provide superior results for routine hot-start, fast, multiplex, long and complex amplification.

PCR master mixes provide the key ingredients necessary for performing PCR in a premixed and optimized format that streamlines and simplifies the PCR workflow. Master mixes come pre-mixed and pre-measured containing DNA polymerase, salts, magnesium, dNTPs and optimized reaction buffer. Your template and primers are the only additions necessary to perform PCR.

• Gelified Master Mix

DNA AmpliGel Master Mix is designed and manufactured using a Biotoools's technology, **Gelification Technology** which is covered by the international patent PCT/ES02/00109. Biotoools gelified master mixes represent a step forward in respect to their liquid counterparts because they are stored at 4 °C, and can be shipped and handle at room temperature*

Advantages

- Minimal set-up time
- Less errors
- Cost-effective (minimal budget for consumables)
- Convenient store and shipment conditions
- Minimal intra- and inter-assay variation

Applications

- Routine PCR with high reproducibility (up to 5 kb)
- Primer extension
- TA cloning
- Gene sequencing
- cDNA Amplification
- High throughput PCR
- Field experiments

• Ordering information

Ref.	Product	Format	Size of PCR products
10.541	DNA AmpliGel Master Mix-Strips	12 x 8-tube strips	Up to 5 kb
10.545	DNA AmpliGel Master Mix-Plates	10 x 96-well plates	Up to 5 kb
10.546	DNA AmpliGel Master Mix-Plates	20 x 96-well plates	Up to 5 kb
10.551	DNA AmpliGel PLUS Master Mix-Strips	12 x 8-tube strips	Up to 10 kb

Which PCR Master Mix is Right for You?

• Standard Master Mix

Features	Applications	
Standard Master Mix	<ul style="list-style-type: none"> Routine PCR (up to 10 kb) High throughput PCR Primer extension 	<ul style="list-style-type: none"> Generation of PCR products for TA cloning Gene sequencing cDNA Amplification
HotStar effect Master Mix	<ul style="list-style-type: none"> High specificity PCR (up to 10 kb) Routine PCR High throughput PCR 	<ul style="list-style-type: none"> Generation of PCR products for TA cloning Gene sequencing cDNA Amplification Primer extension
Fast Master Mix	<ul style="list-style-type: none"> Fast PCR (<25 min-500 bp) High specificity PCR (up to 8 kb) Primer extension 	<ul style="list-style-type: none"> Generation of PCR products for TA cloning Gene sequencing cDNA Amplification
Multiplex Master Mix	<ul style="list-style-type: none"> Typing and detection of pathoge 	<ul style="list-style-type: none"> Typing of transgenic organism Simplification of multiple DNA fragments for SNP genotyping pathogens
Loading Dye Mastermix	<ul style="list-style-type: none"> Routine PCR (up to 10 kb) High throughput PCR Primer extension 	<ul style="list-style-type: none"> Generation of PCR products for TA cloning Gene sequencing cDNA Amplification
Complex Master Mix	<ul style="list-style-type: none"> Amplification of genomic DNA Amplification of GC-rich templates 	<ul style="list-style-type: none"> Amplification of DNA targets with secondary structure Amplification from low amounts of templates ($\geq 0.5\text{pg}$)
